Composite For Autocad 2016: It has the most comprehensive array of all the features and improvements that are in 2016. In Autocad 2016, as in 2016, and 2017 and 2017, it's mainly about how much more polished and clean the interface is and how well the 2017 features fit the 2016 design. New in 2016: New Style 2017 Higher contrast interface More precision in AutoCAD with the new lines and points In 2017 there was a big shift from the alphabetic arrangement of features, and instead they were arranged according to the type of tool. So the first menu, with the tools for the Drafting tab is followed by the tools for the Modify tab. Furthermore in Autocad 2017, there are two more toolbars. One for creating profiles and the other for drawing profiles. They are two separate toolbars and can be activated or deactivated individually. The new lines and points in Autocad 2016 are much more accurate. They show the correct line width, and all the lines are straight, no tangents. The new point tool also adds the ability to create hexagonal and square points, which are very useful for creating complex profiles. The right side of the screen in Autocad is different in 2017. The AutoCAD side includes the different tools for working on drafting. The features for AutoCAD can be changed to tools for design, and the design tools can be changed to drafting tools. The new 2017 right side layout is based on the 3D tools. With that said, there is a 3D drafting tab and a 3D design tab.
